

The CHEMICAL COMPLIANCE Company

Product Notification According to Annex VIII of the CLP Regulation

We ensure the legal security of your hazardous mixtures

When you operate as a manufacturer, importer, and/or distributor of hazardous mixtures and want to market them, you must report on their recipes and ingredients to the appropriate national agencies. In Germany, for example, the Federal Institute for Risk Assessment (BfR) is responsible. However, each country operates with a different reporting process. That's why the EU has implemented EU Regulation 2017/542, Annex VIII to set uniform rules and deadlines across Europe.

For consumer products (private use) as well as for products for commercial and industrial end use, the relevant notification deadlines must be observed (see diagram).

UFI: H563-L90S-R783-J823

CONSULTING AND IMPLEMENTATION

On-Time Reporting on Mixtures

Even though product reporting is to be implemented uniformly across Europe in the future, the reporting process remain complicated. And you probably have plenty of questions, such as: What dates apply to my product mixtures? What regulations must I follow for the Unique Formula Identifier (UFI)? How do I proceed with a report? We show you how best to handle the reporting process and maintain the marketability of your products.

(Legal) Security for Hazardous Mixtures

According to Article 45, Annex VIII of the CLP regulation, manufacturers, importers, and/or distributors are mandated to report hazardous mixtures to national agencies and provide them with data on the chemical composition, the chemical identity, concentration, toxicology, and product category. The agencies then redirect this information to the poison control centers in each country. In an emergency, medical personnel can therefore react quickly and take life-saving measures.

The reporting procedure differs from country to country. Some countries require only the safety data sheet, while others require downloading of a specific program to create the reporting documents.

In Germany, for example, you can report your data directly to the BfR or use the ECHA Submission Portal (PCNP). The latter is recommended when you want to market your product mixtures in multiple EU member states.

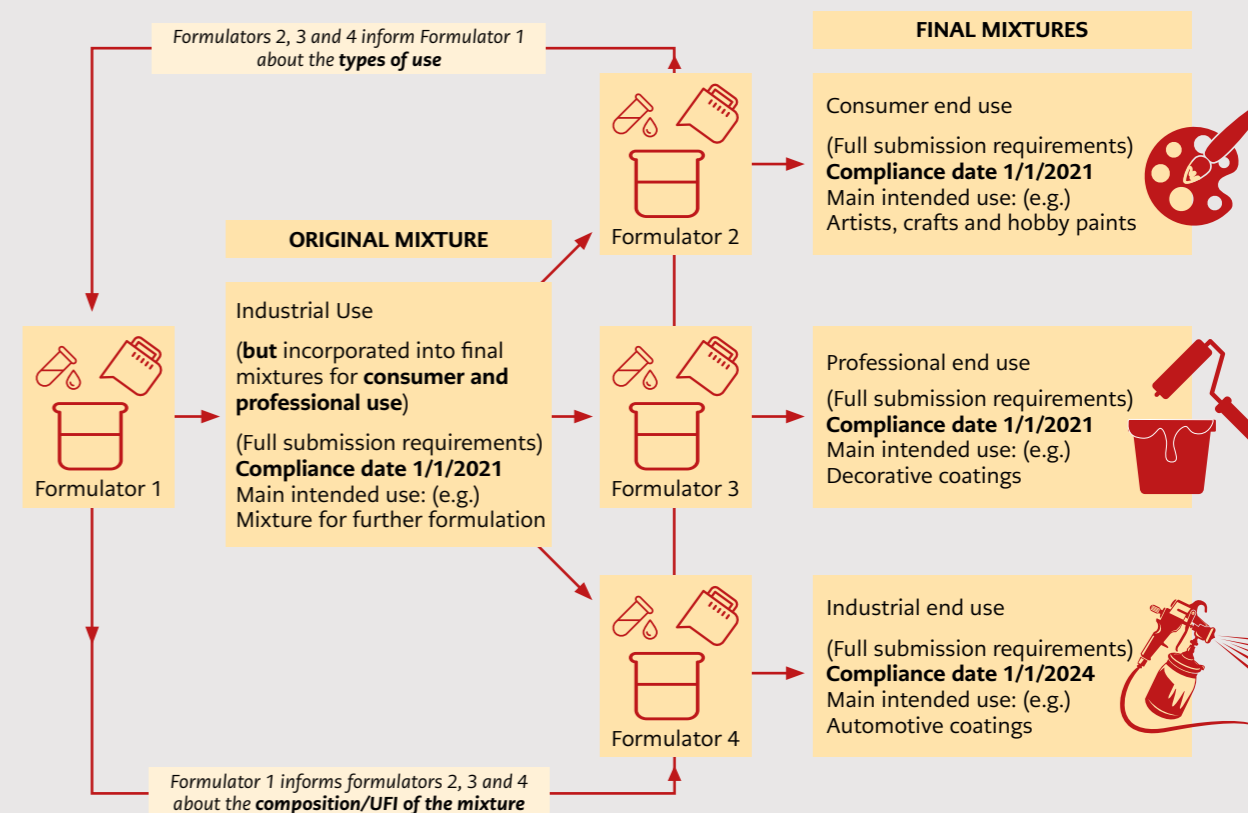

We are thoroughly familiar with the reporting systems in all EU states and with all subject-matter and technical requirements related to the harmonized product notification of the future. We can provide comprehensive advice or, if desired, take over responsibility for the complete reporting procedure.

OUR SERVICES PORTFOLIO IN DETAIL

Product Notification According to Article 45 of the CLP Regulation

- Comprehensive consulting
- Applications for BfR firm codes
- Transmission of data in electronic XML format or, if desired, in PCN format
- Advice on and administration of all the obligations related to reported, such as the UFI code and/or notes required on the safety data sheet

Identification of information requirements and compliance date according to the use type

We know which requirements apply for which use of the mixtures and will take over the complete product notification to the respective authorities for you.

OUR SERVICE COMMITMENT

We Help You

- Analyze the status quo: Which steps are required?
- Develop and define the notification process
- Execute all steps of the notification procedure
- Fulfill all the obligations related to product notification
- Obtain marketability of your products

Your Advantages

- Concentration on core business
- Assured product distribution
- Legal security with government agencies
- Maximum transparency and enablement of effective emergency consulting
- Positive product image
- Avoidance of fines
